At Long Whatton we have the same ambition for all pupils within the computing curriculum, as we believe technology is an important part of everyone's future.

- We achieve this by 'chunking' knowledge up into smaller steps using the Teach Computing curriculum as a framework.

- The linked key questions on our computing curriculum's road map have been purposefully sequenced and grouped into six specific skills which are returned to each year.

- We have selected specific key vocabulary to teach explicitly and return to throughout the curriculum to avoid cognitive overload.

- Technology is used to enhance learning for the individual needs of the children across the curriculum. We ensure the technology used is accessible and support staff are also confident users themselves.

- We provide opportunities to use technology respectfully, which allows pupils to positively represent themselves and others through creative media.
